Observations

Summary

Very nice field of May planted corn. One of the higher stand count averages across your acres probably due to less stress following planting and less residue. Weed pressure is light to moderate with the heaviest pressure being on east side of field through low ground. This area had some weeds go to seed last fall and now have germinated a new flush. I would move this up on your priority list.

	Average	Locations					
		1	2	3	4	5	6
GENERAL							
General Crop Health		Very Good					
Soil Moisture		Adequate					
Vegetative Stage		V1					
Plant Population	32,769.0		32,670	32,670	33,165	32,670	32,670

BROADLEAF WEEDS

Broadleaf	Locations	Severity	Weed Height (Inches)	Notes
Common Ragweed	1	Light		
Giant Ragweed ¹	1	Patches	2	
Lambsquarter	1	Light	1	Heavy pressure around building site ⁴
Velvet Leaf	1	Patches	1	West border
Waterhemp ^{2 3}	1	Patches	1	

GRASS WEEDS

Grass Weeds	Locations	Severity
Foxtail	1	Light
